

Manage More Data & Cut Costs

Intelligent Data Management For Education

Focus on:

Key Benefits:

Simple to Use

Komprise is simple to deploy and use. In minutes, you get visibility into data growth and usage both at a organization level and by department. No dedicated infrastructure, no agents, no stubs, no bottlenecks.

Cost Saving

Komprise identifies cold data across your organization and enables you to set policies that are both cost effective and can be tailored to meet the needs of individual departments.

Non-Disruptive

Komprise moves data transparently so students and faculty see their files as if nothing has changed. Komprise does this without the use of static stubs or by making changes to hot data paths so you always will have access to files.

Modern Architecture

The volume of data being produced by academic organizations is exploding. Komprise utilizes a shared nothing grid architecture that grows on demand to handle this massive scale of data.

Educational institutions face the challenge of managing exponential data growth within flat to shrinking budgets. Storage costs represent a significant portion of an institution's overall IT budget—however, the majority of the data being stored and replicated on high performance, high-cost primary storage systems is inactive (or cold) and yet consuming expensive resources.

Organizations want to be more operationally efficient and cut their overall cost of storing data. But their lack of visibility into data usage across different departments makes resource planning and determining the right data to move near impossible.

Komprise provides academic organizations a comprehensive solution for managing data that delivers crucial analytics and insight into their data as well as the management tools needed to lower storage costs by up to 70% — all without disrupting students, faculty or applications.

Top academic organizations are leveraging Komprise so that they can spend less focus, time and money on how they store and manage data. Instead aligning their efforts and resources on leveraging technology to enhance academic outcomes.

"The addition of Komprise in our file sharing infrastructure has significantly improved our understanding of the data. The ability to see the types, size, ages, and ownership of the files has improved the data management for both my team and clients of our service. Being able to sit down with clients and show them the data allows a level of understanding that was never before available. They are then able to make decisions about how to better manage their own data."

Steve DeGroat, Manager Enterprise Storage
Top Research University

Simple to use

Komprise is radically simple to deploy and use. In 15 minutes, you can start getting visibility into data growth and usage both at an organization-wide level as well as by department. Our planning and analysis tools enable you to plug in your unique costs to get real ROI calculations based on your specific policies. Policies to move, replicate, or delete can be set globally and/or customized to the unique needs of each individual department.

Cost Saving

Komprise enables you to maximize your tight IT budget by identifying cold data across your organization and enabling you to set policies that are both cost-effective and can be tailored to meet the needs of individual departments.

Komprise allows you to use your unique storage costs, delivering a customized ROI calculation for moving data as specified by your policies and forecasting the 3-year savings based on your data's historical growth rate.

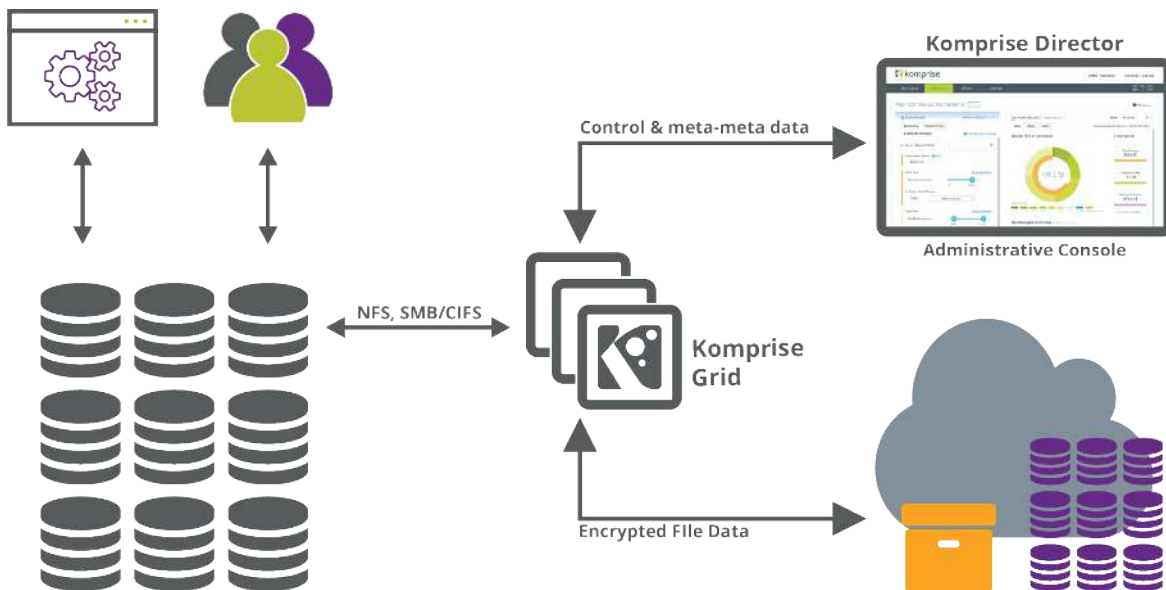

Non-Disruptive

Komprise moves data transparently so students and faculty see their files as if nothing has changed. Komprise does this by providing file access to data stored across object, file and cloud storage solutions. Furthermore, Komprise leaves the active data and control paths unchanged, so access to hot data sees no performance degradation. Komprise does not use static stubs that are difficult to manage and it throttles back as needed so that active usage of the storage and the network are not impacted. All of this means Komprise delivers virtually unchanged experience and access for your users and applications.

Modern Architecture

Komprise requires no hardware infrastructure and the software utilizes a shared-nothing grid architecture that grows on demand to scale with data growth without expensive upfront costs or over provisioning.
