

For Media & Entertainment

"Not only do we save money on our cold data using Komprise, but we are also able to access our data both from the cloud and on premise, which is brilliant!"

- Storage Architect, Major Media Group

Media houses are facing unprecedented challenges – production pace is accelerating while budgets are squeezed. A bulk of the post-production assets are rarely used within months of creation, yet consume expensive resources.

Komprise identifies cold data across your storage and helps you **cut 70% of costs** by transparently moving the cold assets to cost-efficient storage of your choice such as the cloud, or secondary storage.

Moved data is accessible exactly as before, so there is no change in user behavior. Unlike legacy media asset management solutions that are costly, complex and proprietary, Komprise is modern software that is designed to handle today's scale of data. Komprise installs in 15 minutes, works across your storage without proprietary interfaces, scales as needed, and is priced at a fraction of the alternatives.

SIMPLE

Komprise requires no storage agents, no dedicated hardware, installs in 15 minutes and works across storage using industry standard NFS, SMB/CIFS and REST/S3 protocols.

INTUITIVE

Manage Komprise through an intuitive, point-and-click, modern web interface. No training needed.

EFFICIENT

Komprise adapts to your environment, and scales on-demand as needed.

INSTANT ROI

Komprise is priced to deliver savings and instant ROI on every terabyte you manage.

TRANSPARENT

Komprise does not use static stubs and moved data assets are accessed by users and applications exactly as before.
